BERKELEY INITIATIVE FOR TRANSPARENCY  
IN THE SOCIAL SCIENCES

Christensen

Introduction

Study Design  
and Power

Registrations

Project Protocol,  
Reporting Standards  
Data Sharing

Conclusion

Practical suggestion to adequately power trials to help prevent spurious significant results.

- Collaborate with other labs to mutually run each others' experiments (Open Science Collaboration 2014, 2015).
- Replication Project: Psychology
- Many Labs 1, 2, 3
- Crowdsourcing Analysis (Silberzahn and Uhlmann 2016)
- Experimental economics replications (Camerer et al. 2016)

# ONE DATA SET, MANY ANALYSTS

Twenty-nine research teams reached a wide variety of conclusions using different methods on the same data set to answer the same question (about football players' skin colour and red cards).

Dark-skinned players four times more likely than light-skinned players to be given a red card.

- Statistically significant effect
- Non-significant effect

Twice as likely

Equally likely

78.7\*  
11.5\*

Point estimates and 95% confidence intervals. \*Truncated upper bounds.

Christensen

Introduction

Study Design  
and Power

Registrations

Project Protocol,  
Reporting Standards  
Data Sharing

Conclusion

AKA Registered Reports, moves peer review before data gathering, results, and analysis.

- 1 Design a project
- 2 Submit
- 3 Reviewed based on importance of question and quality of design
- 4 Get in-principle acceptance
- 5 Follow through, and nulls get published

20 Journals, 5 more with Special Issues [▶ Link](#)

Conclusion

Make sure you report everything another researcher would need to replicate your research.

- Find the appropriate reporting standard for your field and follow it: <http://www.equator-network.org>
- Report the nuts and bolts of the project implementation in a detailed protocol:  
<http://www.spirit-statement.org>
- Transparency and Openness Promotion (TOP)  
Guidelines: <http://cos.io/top>

Nearly 1 year ago, a group of researchers boldly suggested that the standards for research quality, transparency, and trustworthiness could be improved if journals banded together to adopt eight standards called TOP (Transparency and Openness Promotion).<sup>\*</sup> Since that time, more than 500 journals have been working toward their implementation of TOP. The editors at *Science* have held additional retreats

Registrations

Project Protocol,  
Reporting Standards

Data Sharing

Conclusion

Post your code and your data in a trusted public repository.

- Find the appropriate repository:  
<http://www.re3data.org/>
- Repositories will last longer than your own website.
- Repositories are more easily searchable by other researchers.
- Repositories will store your data in a non-proprietary format that won't become obsolete.

# “Stupid Little Badges”

Christensen

Introduction

Study Design  
and Power

Registrations

Project Protocol,  
Reporting Standards

Data Sharing

Conclusion

Publish in a journal that ‘rewards’ good behavior.  
538: “Even psychologists respond to meaningless rewards”

# Data sharing rose when it was rewarded

Share of papers in four psych journals reporting open data

We believe that openness and transparency are core values of science. For a long time, technological obstacles existed preventing transparency from being the norm. With the advent of the internet, however, these obstacles have largely disappeared. The promise of open research can finally be realized, but this will require a cultural change in science. The power to create that change lies in the peer-review process.

OK, I'm convinced. How do I implement this in my own research?

- Read the manual I wrote. [▶ Link](#)

Conclusion

Here at UC Berkeley, in July at the University of Michigan,  
good chance of abroad next year.

Up to \$30,000 grant for a research project on:

- Develop new methodology
- New tools and approaches for meta-analysis
- Research on researchers and adoption of new norms

Extra funding source for researchers from developing countries.
